Mélanie Gay, assistante
Institute of Economic Research
Pierre-à-Mazel 7, CH-2000 NEUCHATEL
tel: +41 32 718 13 95 - email: melanie.gay@unine.ch

Objectifs:

This course aims at introducing the students to applied economic analysis, illustrating both the methodology of economists and the main instruments used by them to address real world issues. A variety of domains and reading material are covered, so that students get an over-view of the most favored approaches. At the end of the course students should master both quick and in-depth reading, and be familiar with the major empirical approaches used in the empirical literature.

Contenu:

The course is subdivided into five parts: economic regulation, environmental economics, project evaluation, international finance and trade and the environment. Each part consists of two papers which are commented in details during the classes. Each part is complemented by a short paper, which is revealed and discussed during the class.

Forme de l'évaluation:

- Written exam, 2 hours
- Reexamination: written exam, 2 hours

Documentation:

No textbook is necessary as all documents will be made available on the website (<https://claroline.unine.ch/index.php>). If desired, the interested student will find a theoretical and an empirical introduction in the following two references:

- Griffiths, A. and S. Wall (2012), Applied Economics, 12th ed., FT Prentice Hall, Essex.
- Cameron, A.C. and P.K. Trivedi (2010), Microeconometrics using Stata, Stata Press.

Pré-requis:

None.
