Statistical Learning Methods (3IN2046)

Filières concernées	Nombre d'heures	Validation	Crédits ECTS
Master en informatique	Cours: 2 ph Exercice: 2 ph	écrit: 2 h	5

ph=période hebdomadaire, pg=période globale, j=jour, dj=demi-jour, h=heure, min=minute

Période d'enseignement:

- Semestre Printemps

Equipe enseignante:

Prof. Jacques Savoy

Objectifs:

The main objectives of this course is to introduce the students to the various techniques coming mainly for the statistical domain in the machine learning paradigm. The main objectives of the course are the followings:

- 1) to be able to use and program in R, the statistical language (used to analyze Big Data);
- 2) to select, apply and evaluate a learning method using R and to interpret the results;
- 3) to select the most appropriate method according to the data, and to evaluate the quality of the fit.

Contenu:

Introduction to R (statistical software); statistical models and evaluation with R; regression simple and multiple; logistic regression; k-nearest neighbors; linear discriminant analysis (LDA); model evaluation, variable selection and regularization; resampling approaches & evaluation; support vector machines (SVM); boosting; unsupervised approaches (principal component analysis, multidimensional scaling);

Forme de l'évaluation:

Written 2 hours + Practical exercices

Documentation:

Copies of the slides will be available

Pré-requis:

Bachelor in Computer Science

Forme de l'enseignement:

+ 2 hours of practical exercices (with R)
