Deep energy resources (3GH2177)

Filières concernées	Nombre d'heures	Validation	Crédits ECTS
Master en hydrogéologie et géothermie	Cours: 30 pg	contrôle continu: 1	3

ph=période hebdomadaire, pg=période globale, j=jour, dj=demi-jour, h=heure, min=minute

Période d'enseignement:

- Semestre Printemps

Equipe enseignante:

S. Miller, B. Valley

Objectifs:

The objective of this course is to explore the mechanisms responsible for the global distribution of deep energy resources, and how best to exploit them with minimal environmental impact. This includes deep geothermal, hydrocarbon resources, and carbon sequestration. The course incorporates a broad range of topics, including geodynamics, geomechanics, induced seismicity, exploration strategies, and the different types of reservoirs and their management.

Contenu:

Deep Geothermal Energy: High enthalpy systems, possibilities and limitations
 Hydrocarbons: Deposition processes, global distribution, and geopolitical consequences
 Carbon Cycle: Anthropogenic and non-anthropogenic sources of CO₂;
 Effects of atmospheric CO₂ on climate
 Case studies of CO₂ capture and storage
 CO₂ markets and politics

Forme de l'évaluation:

Literature review and oral presentation.

Documentation:

Lecture notes will be provided in the form of PowerPoint presentations, and supplemented with relevant readings from international journals.

Pré-requis:

Introduction to Geothermics, Rock and Earthquake mechanics

Forme de l'enseignement:

Lectures and practical
