Contenu

Over the last few years, alternative investments (hedge funds, private equity, commodities, etc.) gained substantial importance both in the financial industry and in academic research. This course provides an introduction to alternative investments on the master level. The focus on the first half of the lecture lies on the analysis of hedge funds. The second half of the lecture surveys different alternative investments. The course relies heavily on empirical analyses and thus provides students with an excellent basis for an internship or research project in the area of alternative investments.

In detail, we will cover:

- Introduction to alternative investments and hedge funds
- Trading strategies of hedge funds
- Risk and returns of hedge funds
- Merger arbitrage strategy
- Hedge fund asset pricing models
- Hedge fund characteristics and the economic role of hedge funds
- Private equity
- Real estate investments
- Digital assets
- Infrastructure investments, private debt, venture capital, and collectibles
- Commodities, currencies, sports betting, and cryptocurrencies

The course is structured into lectures, deepening content sessions, excel tutorials, exercises, guest lectures, and student presentations.

Forme de l'évaluation

Grading is based on the following components:

- 20%: Oral participation in class
- 30%: Presentation (which will be allocated during the first lecture)
- 50%: Final 120-minutes written exam during the exam session at the end of the semester

The final exam is open-book. Students are allowed to use a non-programmable calculator and the lecture material.

No connected devices are permitted during the final exam. In case of violation of these rules, the students are in a situation of fraud and the unauthorized items will be removed. The exam could be deemed as failed.
