Computational statistics (3ST2010)

Filières concernées	Nombre d'heures	Validation	Crédits ECTS
Master en statistique	Cours: 4 ph	Voir ci-dessous	6

ph=période hebdomadaire, pg=période globale, j=jour, dj=demi-jour, h=heure, min=minute

Période d'enseignement:

- Semestre Printemps

Equipe enseignante

Dr. Alina Matei
Institut de Statistique
Av. de Bellevaux 51, CH-2000 NEUCHÂTEL
Office phone : +41 32 718 13 27 - email : alina.matei@unine.ch

Contenu

The course introduces a number of methods that make use of computer resources to do statistical analysis and modeling. Some of these methods use simulation based approaches to approximate standard errors, confidence intervals, p-values of statistical tests, etc. The course emphasizes the practical side of the methods, by illustrating the theoretical issues with practical applications using the R software. The course includes three parts:

- Random variable generation,
- Elements of Monte Carlo statistical methods,
- Resampling methods for estimating and testing (jackknife, bootstrap, resampling methods for model assessment and selection).

Forme de l'évaluation

A) First attempt

CA graded: The assessment includes 4 parts: 3 tests on computer during the semester (1 hour for each test) and 1 project at the end of the semester (the project should be presented in the classroom during 15 minutes; the project consists in the presentation of a research paper, with the corresponding practical part implemented by the student in R). Each part represents 25% of the final grade.

Attendance

The students must attend each of the previous 4 parts of the assessment.

B) Second attempt

Retake exams

- exam of 3 hours and 15 minutes (1 hour for each chapter provided by the course and 15 minutes presentation of the project; the project consists in the presentation of a research paper, with the corresponding practical part implemented by the student in R).

Retake exam deadline

- The exam will be organized by the professor in agreement with the student, before the end of the corresponding exam session (not in Pidex).

Pré-requis

- Faculté des sciences
- www.unine.ch/sciences

Computational statistics (3ST2010)

Probability theory, inferential statistics, knowledge of R.

Forme de l'enseignement

- 6 ECTS credits
- Elective course for master in statistics (choose 18/24 ECTS)
- Spring Semester
- Course+practical exercises on computer: 4 hours
