Contenu

This course provides an introduction to financial risk management techniques on the master level.

We will cover in detail:

- Risk and risk management in perspective
- Risk measures
- Volatility modelling
- Dependence modelling
- Hedging techniques for market risk
- Management of credit risk
- Case studies on risk management failures
- Management of liquidity risk

The course is structured into lectures, exercises, programming tutorials, guest lectures, and case study presentations.

Forme de l'évaluation

Grading is based on the following components:

- 20%: Oral participation
- 30%: Case study presentation (which will be allocated during the first lecture)
- 50%: Final 120-minutes written exam during the exam session

Retake exam: 120-minutes written exam (100%) during the exam session

The final exam is open-book. Students are allowed to use a non-programmable calculator and the lecture material.

No connected devices are permitted during the final exam. In case of violation of these rules, the students are in a situation of fraud and the unauthorized items will be removed. The exam could be deemed as failed.
